

The BOX

that is becoming
enterprise single sign-on
Solution of Choice for Government

Many governmental organisations—including police and fire departments—are looking for ways to achieve regulatory compliance and protect confidential information without facing the high costs, time, and resources required to secure complex legacy applications and IT environments. Now, a growing number of governmental organisations are discovering that Imprivata OneSign offers a practical and affordable means to do this while also reducing IT help desk costs, eliminating password management problems, and improving user productivity.

Our Single Sign-on Clients Say It All:

“Benefits for the implementation of OneSign’s single sign-on technology will not only be delivered to end users, but we also see that there will be significant savings in our IT Service Desk which can spend up to 40% of its resource time dealing with passcode issues—winners all round!”

—Ron Bentley, IS Programme Manager, Staffordshire Police

“We have a relatively small IT team that supports 800 users across 24 offices and resetting passwords was becoming a major logistical headache that required a significant amount of time. With the demand for new applications rapidly increasing, the issue of password resets was threatening to impact user productivity, so we had to find a smart and affordable solution to stem the problem. Imprivata OneSign has given us exactly what we were looking for.”

—Gary Bellfield, ICT Manager, Tayside Fire and Rescue

“On average council employees need to remember an average of six different passwords for the systems needed on a day to day basis, many of which require unique login ID’s. The OneSign solution will help to streamline and simplify the password process for our users, give faster access to information and significantly improve our system security.”

—Douglas Kinnaird, Head of IT, Midlothian Council

“Excellent” 

Five out of five stars
